

## Direct-acting 2/2 or 3/2-way solenoid valve

- Direct-acting, media-separated valve up to DN 25
- Vibration resistant, block mounted coil system
- Energy saving power reduction for DC versions
- High safety due to electrical position feedback
- Robust, service friendly manual override

The valve operates according to the lever principle and can therefore switch big orifices directly. Available in 2/2-way version as well as a 3/2-way valve. The armature works horizontally on a tightly coupled toggle. The cylinder seal, located at the lower lever, is pressed by the horizontal movement of the valve seat. The plastic-coated metal lever forms a unit with the implemented gas-tight membrane. With this construction the actuator is disconnected from the media fluid housing.

### Circuit function A

2/2-way valve, direct-acting,  
Normally closed

### Circuit function B

2/2-way valve, direct-acting,  
normally open

### Circuit function C

3/2-way valve, direct-acting,  
in de-energized position,  
port A exhausted

### Circuit function D

3/2-way valve, direct acting,  
in de-energized position,  
port B pressurized

### Circuit function E

mixer valve, direct-acting,  
in de-energized position,  
P2→A open, P1 closed

### Circuit function F

distribution valve, direct-acting,  
in de-energized passage,  
P→B open
